

Problem A. Greedy Scheduler

Time Limit 1000 ms
Mem Limit 524288 kB

Description

A store has n cashiers numbered sequentially from 1 to n , with c customers in a queue. A customer at the front of the queue is constantly assigned to the first unoccupied cashier, i.e., cashier with the smallest number. The i th customer's shopping cart takes t_i seconds to process.

Find which cashier will process each customer's shopping cart.

Input

The first line of input contains two space-separated integers n and c ($1 \leq n \leq c \leq 1000$). The second line of input contains c space-separated integers $t_1, \dots, t_c$ ($1 \leq t_i \leq 1,000$), representing the length of time required to handle that customer.

Output

Output a single line containing c space-separated integers, each with the cashier number that handles that customer.
