

Problem A. Replace

Time Limit 2000 ms

Warning

Do not make any mention of this problem until July 17, 2021, 6:00 p.m. JST. In case of violation, compensation may be demanded. After the examination, you can reveal your total score and grade to others, but nothing more (for example, which problems you solved).

Problem Statement

We have a string S of length N .

You can do the following operation any number of times:

- Replace a (contiguous) substring of S that matches `axa`, `ixi`, `uxu`, `exe`, or `oxo` with `...`.

You want to do this operation as many times as possible.

Print a string S that results from doing the maximum number of operations possible.

Constraints

- $1 \leq N \leq 2 \times 10^5$
- S is a string of length N consisting of lowercase English letters.

Input

Input is given from Standard Input in the following format:

```
 $N$   
 $S$ 
```

Output

Print a resulting string S . If there are multiple possible results, you may print any of them.

Sample 1

Input	Output
9 ixixixixi	...x...xi

The other correct answers include ...xix...

Sample 2

Input	Output
6 auxuxa	a...xa

We cannot do any more operations on a...xa.

Sample 3

Input	Output
15 gxxgaxixuxexxxx	gxxgaxixuxexxxx

We may be unable to do a single operation.
