

Problem E. Precondition

Time Limit 2000 ms

Problem Statement

You are given strings S and T consisting of lowercase and uppercase English letters.

Determine whether the string S satisfies the following condition:

- Every uppercase letter in S that is not at the beginning is immediately preceded by a character contained in T . More formally, for all integers i such that $2 \leq i \leq |S|$, if the i -th character of S is uppercase, then the $(i - 1)$ -th character of S is contained in T .

Constraints

- Each of S and T is a string consisting of lowercase and uppercase English letters with length between 1 and 100, inclusive.

Input

The input is given from Standard Input in the following format:

S
 T

Output

If S satisfies the condition in the problem statement, output **Yes**. Otherwise, output **No**.

Sample 1

Input	Output
AtCoder Total	Yes

The only uppercase letter in S that is not at the beginning is the 3rd character **C**. The immediately preceding character **t** is contained in T , so output **Yes**.

Sample 2

Input	Output
aBCdE abdcba	No

The 3rd character of S is the uppercase letter **C**, and its immediately preceding character is **B**, but **B** is not contained in T .

Sample 3

Input	Output
abcde XYZ	Yes
